

### **REMARKS**

Claims 19-33 remain pending in the application, withdrawn claims 1-18 and 34-41 being canceled subsequent to having been withdrawn from consideration by the Examiner.

#### **Claims 20, 25, and 30 informalities**

In the Office Action, claims 20, 25, and 30 were objected to because of noted informalities. In particular, the Examiner questions where support is for specific language in these claims, i.e., "said server is a least recently used protocol gateway".

The Examiner is respectfully directed to disclosure, e.g., bridging pages 34 and 35 of the specification. This particular passage reads as follows:

"the least recently used BES 122 can be used by checking a time stamp identifying the last access to the BES 122." Further down page 35 the disclosure continues by explaining that "PG 116 would forward the message to the least recently used MR 124."

Other disclosures exist, e.g., at page 34, lines 24-27.

It is respectfully submitted that claims 20, 25, and 30 are in full conformance with 35 USC 112. It is respectfully requested that the objection be withdrawn.

#### **Claims 19-33 over Oehrke**

Claims 19-33 were rejected under 35 USC 102(e) as allegedly being anticipated by U.S. Pat. No. 7,047,300 to Oehrke ("Oehrke"). The Applicant respectfully traverses the rejection.

Claims 19-33 require an authenticator to authenticate an origin of a message before the message is routed by the message router between a protocol gateway and a server.

The Examiner cites Oehrke's router 51 and server 76 (shown in Fig. 3), and specific disclosure at col. 7, lines 56-60; col. 8, lines 2-9 and 38-40; and col. 9, lines 19-41, for allegedly disclosing the invention of claims 19-33. In the Examiner's Response to Arguments in the Final Office Action, the Examiner

is admittedly “confused as to why applicant feels the user is not the originator of the message. One of ordinary skill in the art would clearly recognize that if a user creates a message, that user is the originator of the message.” (Final Office Action at 3).

The “user” in this context is what Oehrke refers to as a user. Oehrke’s “user” as discussed by Oehrke is “company A” attempting to gain access to a data center 52. Company A is NOT the origin of a message that is being routed. The person who WROTE the message is the origin as that term is used in claims 19-33.

Company A is attempting to establish mirrored data in a survivable data system. In this attempt, they need access to the data center 52 to CREATE the MIRRORED DATA.

For this reason alone claims 19-33 are patentable.

Moreover, claims 19-33 not only require authentication of an origin of a message, but authentication of the origin of a message before the message is routed by a message router.

Not only does Oehrke fail to disclose authentication of the **origin** of a message, Oehrke further fails to disclose such authentication of the **origin** of a message before the message is routed.

Oehrke explains that the data center provides various applications and associated data for customers or owners, e.g., company A, who may use the data center for its intranet network. (Oehrke, col. 7, lines 42-45). Once company A has been authenticated, then the “users of intranet network 54 are provided with access to the data center 52.” (Oehrke, col. 7, lines 48-50).

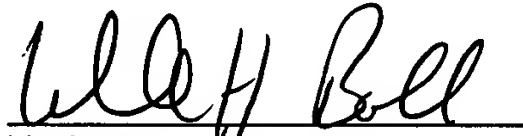

Oehrke authenticates that the NETWORK has access to use resources on a mirrored network—not the **origin** of a particular message that is attempting to be routed, much less the origin of a message BEFORE it is routed, as claimed by claims 19-33.

For at least all the above reasons, claims 19-33 are patentable over the prior art of record. It is therefore respectfully requested that the rejection be withdrawn.

**Conclusion**

All objections and rejections having been addressed, it is respectfully submitted that the subject application is in condition for allowance and a Notice to that effect is earnestly solicited.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "William H. Bollman", written over a horizontal line.
